In spite of the fact that these applications have, at least in many cases, been undertaken without precise methods, without theoretical or practical knowledge, in a word, without technique, it has become an extremely important process capable of numerous and varied applications in all branches of metallic construction and repair. A great future can be foreseen for this process from the moment its technique becomes known to the welder, and when manufacturers who use the process realise that knowledge and reflection are at least as important as skill and dexterity of hand. Autogenous welding is certainly the one process of construction and repair that requires, from top to bottom of its application, most reflection, intelligence, and conscientiousness. It is, for the welder, a trade which differentiates it from the majority of others in this sense that mechanical work is...
